

Average pH Level

Average pH calculation

$$\text{Average pH} = \frac{\text{Sum of all pH Levels}}{\text{Total Number of Samples}}$$

1. Calculate the average pH of your local environment in the space below:

2. Typically, environments have an average pH that is neutral (between 6-8). What does your result tell you about the pH levels in your local environment?

3. Is your result able to answer your original question (from the Ask stage)? Explain why/why not.
