

Weather Patterns

Calculate daily average daily rainfall

$$\text{Daily average} = \frac{\text{Total accross days}}{\text{Total number of days}}$$

1. Calculate the **daily average rainfall** you observed in the space below:

Weather Patterns

Have a look at the Historic Weather Information Table below for Braybrook.

- Rainfall record: Last 70 years

Weather Patterns

2. How much did it rain per day on average compared to the past?

What does your result tell you about how much it is raining compared to the past?

3. Is your result able to answer your original question (from the Ask stage)?

Explain why/why not.
