

Average Signal Score

Average Signal Score calculation

$$\text{Average Signal Score} = \frac{\text{Total Signal Score}}{\text{Total Tally (Total Number of Waterbugs)}}$$

1. Calculate the average signal score of your local environment in the space below:

2. Typically, a waterway with an average signal score of 6 or more is relatively healthy. What does your result tell you about the types of bugs that live in the water?

3. Is your result able to answer your original question (from the Ask stage)? Explain why/why not.
